Stockholm Water Technology

### Main product:

CDI Core-M

### Aim:

Ensuring sustainable use of Earth's most precious resource - water - through smart purification technology

- Start year: 2018
- Generated funding: EUR 175 000
- Challenge: Water purification

Powered by:

### THE PROJECT

#### The idea

With our water purification technology, we want to contribute to innovation in both the energy and water sectors, positively impacting the energy-water nexus.

#### Inspiration

Our inspiration is Earth. Contributing to a better world has been a life-long goal. Developing this technology provided us with the opportunity to tackle both energy and water issues. Once we started making real progress, setting up a venture was a logical next step in our journey. We are looking forward to giving back to society.

#### Unique selling points

The technology is very easy to use and monitor, employing a handy, built-in database and a visually intuitive user interface. It is also very versatile and generates a small energy footprint, offering high water recovery capacity. Finally, its ability to customise water quality requirements according to user objectives can impact the building of future water infrastructure.

#### Societal impact

With our system, contaminated water is processed automatically into clean water for either commercial, industrial or private use. This efficiency and adaptability allow users in developing countries to save water and energy without

compromising on quality or cost, thereby improving their lives and preserving the planet.

#### EIT Community support

From essential financing and valuable business advice to wonderful office spaces – EIT InnoEnergy has been crucial in getting us where we are now. The next development phase of our business plan, also elaborated with their support, will include reaching out to its investor and corporate network – we can't wait! We are very grateful to have received this kind of support and opportunities.

### THE NOMINEE

#### Entrepreneurial spirit

Our team consists of true entrepreneurs who have been developing their networks for years to, ultimately, make the world a better place. Our determination is yielding results too: both in Sweden and abroad, a number of customer sales have already been made.

#### Rewarding moments

I believe that the greatest reward of my career is yet to come. It would be when SWT products are recognised as the future of water purification technology world-wide.

“From essential financing and valuable business advice to wonderful office spaces – EIT InnoEnergy has been crucial in getting us where we are now.”
